WHAT IS CLAIMED IS:

1. A camera device comprising:

an optical system;

a driving unit which drives the optical system;

5 and

a control unit which makes the driving unit start driving of the optical system to a predetermined state by an initialization of the optical system by using an interrupt processing which is executed by setting an

10 interrupt processing routine before the operating system is started, when the camera device is started up in a state in which an operation mode for photographing is set.

2. The camera device according to claim 1,

15 wherein said optical system comprises a movable lens.

3. The camera device according to claim 1, wherein said optical system comprises a sinkable lens.

4. A method for starting a camera device comprising an optical system, the method comprising:

20 determining whether or not the an operation mode for photographing is set; and

driving the optical system to a predetermined state by an initialization of the optical system by using an interrupt processing which is executed by

25 setting an interrupt processing routine before the operating system is started, when the camera device is started up in a state in which an operation mode for

photographing is set.

5. The method according to claim 4, wherein said optical system comprises a movable lens.

6. The method according to claim 4, wherein said optical system comprises a sinkable lens.

7. A computer program for a camera device comprising an optical system and a driving unit which drives the optical system, the program being stored in a computer readable medium, and the program comprising:

determining whether or not the an operation mode for photographing is set; and

driving the optical system to a predetermined state by an initialization of the optical system by using an interrupt processing which is executed by setting an interrupt processing routine before the operating system is started, when the camera device is started up in a state in which an operation mode for photographing is set.

8. The program according to claim 7, wherein said optical system comprises a movable lens.

9. The program according to claim 7, wherein said optical system comprises a sinkable lens.
